

**A comprehensive software program that covers all the administration of running a vehicle hire business**

easy to use - uses latest Windows programming techniques

vehicle fleet and maintenance records include full cost analysis

customer detailed database

full documentation generation

seamless integration with leading Accounting software

comprehensive reporting features

**- streamline your business -**

**- save on staffing costs -**

**- improve efficiency -**

**- help your business grow -**

vehicle rental software

Comprehensive easy to use entry screens with colour coded buttons and scrolling pull down options

Book Out, Hirer, Driver, Collection, Hire Details, Charges, Payments

**Maintain Agreements**

Detailed information recorded for the hire with vehicle info and timed start. The Hirer information can be obtained either from the systems own customer database or from a postcode address lookup facility built into the system

Hirer, Driver details, Delivery and Collection screens need completing. The charges are calculated against the hire period and payments recorded onto the system. This will then print out on the agreement with full details for the customer.

When the vehicle is returned the payment balance received is entered onto the system and a payment receipt/invoice produced.

**Vehicle Records**

Full information recorded on each vehicle with hire history and maintenance records linked to accounting system.

You can visibly see on screen how much the vehicle has cost in maintenance and how much it has earned you in hire charges and retain a full cost analysis for the vehicle so reliability etc can be tracked.

A detailed rating structure is applied to the system with rates being broken down into types and day types and well as Vehicle and Pricing Groups. Charge units can be any defined criteria.

**Invoices**

All supplier invoices relating to each vehicle are entered here which then link automatically into a full accounting system. This can run either with the systems built in Accounts system or your existing Accounts software, Sage Line 50 or 100 being a prime example.

All this enables you to save time and money in giving you the information you need by only entering the information into the system one.

**Agreement layout**

This can be designed to meet your individual requirements. A standard layout from the system enables your logo to be incorporated

The software is available on an annual licence option which can be paid over a period of 12 months
